When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. Sometimes, the object's speed and direction will change at the same time. This is called acceleration. Acceleration is the rate of change of velocity. Velocity is a vector quantity, which means it has both a magnitude and a direction. Speed is a scalar quantity, which means it only has a magnitude.</p> <p>Newton's second law states that an object's acceleration is directly proportional to the net force acting on it. This means that if you increase the net force on an object, its acceleration will also increase. If you decrease the net force, its acceleration will also decrease. If the net force is zero, the object's acceleration will be zero. This means that the object's velocity will remain constant.</p> <p>There are different types of forces. Some forces are contact forces, which means they act on an object through direct contact. Examples of contact forces include friction, normal force, and tension. Other forces are non-contact forces, which means they act on an object without touching it. Examples of non-contact forces include gravitational force, magnetic force, and electric force.</p> <p>Forces can cause an object to change its motion in different ways. For example, a net force can cause an object to speed up, slow down, or change direction. A net force can also cause an object to change its shape. This is called deformation. Deformation can be temporary or permanent. For example, a spring can be stretched or compressed, and it will return to its original shape when the force is removed. However, a metal wire can be stretched so far that it will not return to its original shape.</p> </div> <p>Answer the correct answer for each question.</p> <ol style="list-style-type: none"> Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force Which of the following is not a type of contact force? <ol style="list-style-type: none"> Gravitational force Normal force Friction Electromagnetic force
