

# Introduction to Programming with RAPTOR

By Dr. Wayne Brown

## What is RAPTOR?

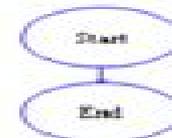

RAPTOR is a visual programming development environment based on flowcharts. A flowchart is a collection of connected graphic symbols, where each symbol represents a specific type of instruction to be executed. The connections between symbols determine the order in which instructions are executed. These ideas will become clearer as you use RAPTOR to solve problems.

We use RAPTOR in CS110 for several reasons:

- The RAPTOR development environment minimizes the amount of syntax you must learn to write correct program instructions.
- The RAPTOR development environment is visual. RAPTOR programs are diagrams (directed graphs) that can be executed one symbol at a time. This will help you follow the flow of instruction execution in RAPTOR programs.
- RAPTOR is designed for ease of use. (You might have to take our word for this, but other programming development environments are extremely complex.)
- RAPTOR error messages are designed to be more readily understandable by beginning programmers.
- Our goal is to teach you how to design and execute algorithms. These objectives do not require a heavy-weight commercial programming language such as C++ or Java.

## RAPTOR Program Structure

A RAPTOR program is a set of connected symbols that represent actions to be performed. The arrows that connect the symbols determine the order in which the actions are performed. When executing a RAPTOR program, you begin at the **Start** symbol and follow the arrows to execute the program. A RAPTOR program stops executing when the **End** symbol is reached. The smallest RAPTOR program (which does nothing) is depicted at the right. By placing additional RAPTOR statements between the **Start** and **End** symbols you can create meaningful RAPTOR programs.

## Introduction to RAPTOR Statements/Symbols

RAPTOR has six (6) basic symbols, where each symbol represents a unique type of instruction. The basic symbols are shown at the right. The top four statement types, Assignment, Call, Input, and Output, are explained in this reading. The bottom two types, Selection and Loops, will be explained in a future reading.
