Programming With Constraints An Introduction:

Programming with Constraints Kimbal Marriott, Peter Stuckey, 1998-02-26 The job of the constraint programmer is to use mathematical constraints to model real world constraints and objects In this book Kim Marriott and Peter Stuckey provide the first comprehensive introduction to the discipline of constraint programming and in particular constraint logic programming The book covers the necessary background material from artificial intelligence logic programming operations research and mathematical programming Topics discussed range from constraint solving techniques to programming methodologies for constraint programming languages Because there is not yet a universally used syntax for constraint logic programming languages the authors present the programs in a way that is independent of any existing programming language Practical exercises cover how to use the book with a number of existing constraint languages

Parallel and Constraint Logic Programming Ioannis Vlahavas, Panagiotis Tsarchopoulos, Ilias Sakellariou, 2012-12-06 Constraint Logic Programming CLP an area of extreme research interest in recent years extends the semantics of Prolog in such a way that the combinatorial explosion a characteristic of most problems in the field of Artificial Intelligence can be tackled efficiently By employing solvers dedicated to each domain instead of the unification algorithm CLP drastically reduces the search space of the problem which leads to increased efficiency in the execution of logic programs CLP offers the possibility of solving complex combinatorial problems in an efficient way and at the same time maintains the advantages offered by the declarativeness of logic programming The aim of this book is to present parallel and constraint logic programming offering a basic understanding of the two fields to the reader new to the area The first part of the book gives an introduction to the fundamental aspects of conventional logic programming which is necessary for understanding the parts that follow The second part includes an introduction to parallel logic programming architectures and implementations proposed in the area Finally the third part presents the principles of constraint logic programming The last two parts also include descriptions of the supporting facilities for the two paradigms in two popular systems ECLIPSe and SICStus These platforms have been selected mainly because they offer both parallel and constraint features Annotated and explained examples are also included in the relevant parts offering a valuable guide and a first practical experience to the reader Finally applications of the covered paradigms are presented The authors felt that a book of this kind should provide some theoretical background necessary for the understanding of the covered logic programming paradigms and a quick start for the reader interested in writing parallel and constraint logic programming programs However it is outside the scope of this book to provide a deep theoretical background of the two areas In that sense this book is addressed to a public

interested in obtaining a knowledge of the domain without spending the time and effort to understand the extensive theoretical work done in the field namely postgraduate and advanced undergraduate students in the area of logic programming This book fills a gap in the current bibliography since there is no comprehensive book of this level that covers the areas of conventional parallel and constraint logic programming Parallel and Constraint Logic Programming An Introduction to Logic Parallelism and Constraints is appropriate for an advanced level course on Logic Programming or Constraints and as a reference for practitioners and researchers in industry

Constraints in Computational Logics: Theory and Applications Hubert Comon, Claude Marche, Ralf Treinen, 2003-08-06 Constraints provide a declarative way of representing infinite sets of data They are well suited for combining different logical or programming paradigms as has been known for constraint logic programming since the 1980s and more recently for functional programming The use of constraints in automated deduction is more recent and has proved to be very successful moving the control from the meta level to the constraints which are now first class objects This monograph like book presents six thoroughly reviewed and revised lectures given by leading researchers at the summer school organized by the ESPRIT CCL Working Group in Gif sur Yvette France in September 1999 The book offers coherently written chapters on constraints and constraint solving constraint solving on terms combining constraint solving constraints and theorem proving functional and constraint logic programming and building industrial applications

Constraint Logic Programming using Eclipse Krzysztof R. Apt, Mark Wallace, 2006-12-21 Constraint logic programming lies at the intersection of logic programming optimisation and artificial intelligence. It has proved a successful tool in many areas including production planning, transportation scheduling, numerical analysis and bioinformatics. Eclipse is one of the leading software systems that realise its underlying methodology. Eclipse is exploited commercially by Cisco and is freely available and used for teaching and research in over 500 universities. This book has a two-fold purpose: It is an introduction to constraint programming appropriate for one-semester courses for upper undergraduate or graduate students in computer science or for programmers wishing to master the practical aspects of constraint programming. By the end of the book, the reader will be able to understand and write constraint programs that solve complex problems. Second, it provides a systematic introduction to the Eclipse system through carefully chosen examples that guide the reader through the language and illustrate its power, versatility and utility.

Using Constraints to Render Websites Lars Kotthoff, 2008-02 Diploma Thesis from the year 2007 in the subject Computer Science Theory grade 1.0 University of Leipzig language English abstract Constraint programming is an area of Artificial Intelligence which has many applications. This thesis applies its techniques to a new kind of problem: the rendering of online retailer websites. First, in-depth introductions to constraint programming and the problem of rendering a shop website will be given. A prototypical implementation of a constraint problem solver and a system to solve and illustrate the problem will be described. The architecture of the prototypical implementation and specific features, algorithms and design decisions will be detailed, analysed and illustrated. An overview of related work both in the fields of constraint programming and website generation will be presented and existing technologies evaluated. Features and concepts unique to this thesis, like real-time constraint satisfaction, will be introduced and discussed. Finally, a comprehensive example will illustrate the problem, means of modelling it and possible solutions. An outlook to future work and a summary conclude the thesis.

Constraint Programming ist ein Teilgebiet der künstlichen Intelligenz mit vielen praktischen Anwendungen. Diese Diplomarbeit wendet die Techniken auf eine neue Art von Problem an: das Rendern von Webseiten von Internetshops. Zuerst wird eine detaillierte Einführung zu Constraint Programming und dem Problem, die Webseite eines Online Shops zu rendern, gegeben werden. Eine Beispielimplementierung eines Constraint Problem Solvers und eines Systems, um das Problem zu lösen und illustrieren, werden beschrieben werden. Die Architektur der Beispielimplementierung und spezielle Eigenschaften, Algorithmen und Implementierungsentscheidungen werden genau beschrieben, analysiert und illustriert werden. Ein Überblick von ähnlichen Arbeiten sowohl im Bereich des Constraint Programming als auch im Bereich des Generierens von Webseiten wird gegeben.
