Forces & Motion

Read the passage above and then answer the questions

Forces are pushes or pulls that can start, stop or change direction. When a force is applied to an object, it can move towards the Earth, which is gravity.

Motion is the change in the position of an object over time. It can be in a straight line or in a circle. It can be fast or slow, and it can be in different directions.

There are different types of forces. Friction is a force that slows down motion when two surfaces rub against each other. Magnetism can attract or repel objects.

Understanding forces and motion helps engineers design roller coasters, cars, and even roller coasters. A better understanding of forces and motion can help us design better roller coasters.

For each question, choose the exact answer:

- What is a force?
 - a. A push or pull
 - b. A type of motion
 - c. A type of energy
- What does friction do to moving objects?
 - a. Speeds them up
 - b. Changes their direction
 - c. Slows them down
 - d. Makes them float

Tick the statements that are true according to the passage. (✓ means true, ✗ means false):

- Gravity is a force that pushes objects away from the Earth.
- Motion is the change in the position of an object over time.
- Magnetism can only attract objects.
- Engineers use knowledge of forces and motion to design roller coasters.

Answer the question below:

What is gravity?

How does friction affect a book sliding across a table?
