Sensory Ecology Behaviour And Evolution:

Sensory Ecology, Behaviour, and Evolution Martin Stevens, 2013-02-07 Throughout their lives animals must complete many tasks including finding food avoiding predators attracting mates and navigating through a complex and dynamic environment Consequently they have evolved a staggering array of sensory organs that are fundamental to survival and reproduction and shape much of their evolution and behaviour Sensory ecology deals with how animals acquire process and use information in their lives and the sensory systems involved It investigates the type of information that is gathered by animals how it is used in a range of behaviours and the evolution of such traits It deals with both mechanistic questions e.g. how sensory receptors capture information from the environment and how the physical attributes of the environment affect information transmission and functional questions e.g. the adaptive significance of the information used by the animal to make a decision Recent research has dealt more explicitly with how sensory systems are involved with and even drive evolutionary change including the formation of new species Sensory Ecology Behaviour and Evolution provides a broad introduction to sensory ecology across a wide range of taxonomic groups covering all the various sensory modalities e.g. sound visual chemical magnetic and electric relating to diverse areas spanning anti predator strategies foraging mate choice navigation and more with the aim being to illustrate key principles and differences This accessible textbook is suitable for senior undergraduates graduate students and professional academics taking courses or conducting research in sensory ecology biology neuroethology behavioural and evolutionary ecology communication and signalling It will also be of relevance and use to psychologists interested in sensory information and behaviour

Sensory Ecology, Behaviour, and Evolution Martin Stevens, 2013 This modern textbook of sensory ecology provides an introduction to the key ideas theories and examples describes how sensory systems work and explores the links between the senses animal signals behaviour and evolution It also tackles mechanistic and functional questions integrating theoretical and empirical work

Sensory Ecology, Behaviour, and Evolution Martin Stevens, 2013-02-07 It deals with both mechanistic questions e.g. **The American Naturalist**, 2007

The Sensory Ecology of Birds Graham R. Martin, 2017-03-30 Birds are renowned for their exceptional vision and the way that this enables them to survive and navigate the world in such a unique way However it is now recognised that avian behaviour is guided by information drawn from many different senses which are then used in integrated and complementary ways to answer the many different sensory challenges posed by specific environments and particular tasks Understanding how sensory information is used by birds has important applications in conservation such as providing vital insights into why birds are prone to collisions with structures like power lines and wind turbines and why so many diving birds become entrapped in nets A sensory ecology approach suggests how these problems can be mitigated The Sensory Ecology of Birds ranges widely across species environments and behaviours to present a synthesis that challenges previous assumptions about the information that controls the behaviour of birds A bird may use a wide range and

combination of sensory information that comes from sight hearing smell mechanoreception taste and magnetoreception It may also include specific refinements of senses such as echolocation and remote touch from the bill The book recognises that there are many complex and subtle trade offs and complementarities of information between different types of sensory information This accessible text will be of interest to a wide ornithological readership from undergraduates to researchers as well as a broader audience of behavioural ecologists and evolutionary biologists *Smithsonian Opportunities for Research and Study in History, Art, Science* ,2011 **Ecology** ,1960 Publishes essays and articles that report and interpret the results of original scientific research in basic and applied ecology Secret Worlds Martin Stevens,2021 Beyond our hearing rats and mice sing to woo females Beyond our sight bees see the ultraviolet markings of flowers Beyond our conception sea turtles sense latitude and longitude through an internal magnetic map and sharks experience the electric fields created by prey So many animals sense their environment in rich strange and often exquisitely refined ways including ways beyond the limits of our own senses that scientists have only relatively recently identified In this book Martin Stevens describes these astonishing worlds of experience hidden from us what drove their evolution how scientists learn about them and the puzzles that remain Book jacket **Sensory Ecology** M. Ali,2013-03-09 Never so pleased sir Twas an excellent dance And for a preface I never heard a better Two Noble Kinsmen Act III Sc S This volume is based mostly on the lectures delivered at an Advanced Study Institute ASI of the same title held in July 1977 One lecture given is not in the volume and three chapters although not based on lectures delivered have been added to better balance the book A chapter on the ecosensory functions in crustaceans could not be put in due to time contingency This absence is deeply regretted The idea to hold an ASI on Sensory Ecology evolved slowly mainly due to my own research interest in the past and partly to the discussions I had with a number of colleagues particularly Dr John Lythgoe of the University of Sussex The purpose was to interface Sensory Physiology with Ecology so that workers in those fields will develop a greater awareness for each other Sense organs have of course evolved to keep their possessors ware of the environment and changes in it Thus normally one could expect that a study of their functions will be undertaken in relation to environmental parameters International Journal of Primatology ,1990 Include abstracts **Tropical Zoology** ,2009 *The Directory of Graduate Studies* ,1999 *The Zoological Record* ,2003 *Journal of Experimental Biology* ,2008 Patterns of Evolution in Galapagos Organisms Robert I.
