Advanced Modelling Techniques in Structural Design Feng Fu, 2015-03-26 The successful design and construction of iconic new buildings relies on a range of advanced technologies in particular on advanced modelling techniques In response to the increasingly complex buildings demanded by clients and architects structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work *Advanced Modelling Techniques in Structural Design* introduces numerical analysis methods to both students and design practitioners It illustrates the modelling techniques used to solve structural design problems covering most of the issues that an engineer might face including lateral stability design of tall buildings earthquake progressive collapse fire blast and vibration analysis non linear geometric analysis and buckling analysis Resolution of these design problems are demonstrated using a range of prestigious projects around the world including the Buji Khalifa Willis Towers Taipei 101 the Gherkin Millennium Bridge Millau viaduct and the Forth Bridge illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems

Building Information Modeling André Borrmann, Markus König, Christian Koch, Jakob Beetz, 2018-09-19 Building Information Modeling BIM refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility including its design construction and operation In order to exploit BIM methods to their full potential a fundamental grasp of their key principles and applications is essential Accordingly this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices The book s content is divided into six parts Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings as well as methods for process modeling Next Part II covers the important aspect of the interoperability of BIM software products and describes in detail the standardized data format Industry Foundation Classes It presents the different classification systems discusses the data format CityGML for describing 3D city models and COBie for handing over data to clients and also provides an overview of BIM programming tools and interfaces Part III is dedicated to the philosophy organization and technical implementation of BIM based collaboration and discusses the impact on legal issues including construction contracts In turn Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility including the use of BIM for design coordination structural analysis energy analysis code compliance checking quantity take off prefabrication progress monitoring and operation In Part V a number of design and construction companies report on the current state of BIM adoption in connection with actual BIM projects and discuss the approach pursued for the shift toward BIM including the hurdles taken Lastly Part VI summarizes the book s content and provides an outlook on future developments The book was written both for professionals using or programming such tools and for students in Architecture and Construction Engineering programs

Landscape Architecture and Digital Technologies Jillian Walliss, Heike Rahmann, 2016-02-12

Landscape Architecture and Digital Technologies explores how digital technologies are reshaping design and making in landscape architecture. While the potentials of digital technologies are well documented within landscape planning and visualisation, their application within design practice is far less understood. This book highlights the role of the digital model in encouraging a new design logic that moves from the privileging of the visual to a focus on processes of formation bridging the interface of the conceptual and material, the virtual and the physical. Drawing on interviews and projects from a range of international designers including Snhetta, Arup, Gustafson Porter ASPECT Studios, Grant Associates, Catherine Mosbach, Philippe Rahm, PARKKIM, LAAC and PEG office of landscape architecture among others, the authors explore the influence of parametric modelling, scripting, real time data simulation, prototyping, fabrication and Building Information Modelling on the design and construction of contemporary landscapes. This engagement with practice is expanded through critical reflection from academics involved in landscape architecture programs around the world that are reshaping their research and pedagogy to reflect an expanded digital realm. Crossing critical theory, technology and contemporary design, the book constructs a picture of an emerging twenty first century practice of landscape architecture, practice premised on complexity and performance. It also highlights the disciplinary demands and challenges in engaging with a rapidly evolving digital context within practice and education. The book is of immense value to professionals and researchers and is a key publication for digital landscape courses at all levels.

BIM Handbook Rafael Sacks, Charles Eastman, Ghang Lee, Paul Teicholz, 2018-08-14. Discover BIM: A better way to build better buildings. Building Information Modeling (BIM) offers a novel approach to design, construction and facility management in which a digital representation of the building product and process is used to facilitate the exchange and interoperability of information in digital format. BIM is beginning to change the way buildings look, the way they function and the ways in which they are designed and built. The *BIM Handbook Third Edition* provides an in depth understanding of BIM technologies, the business and organizational issues associated with its implementation and the profound advantages that effective use of BIM can provide to all members of a project team. Updates to this edition include information on the ways in which professionals should use BIM to gain maximum value. New topics such as collaborative working, national and major construction clients, BIM standards and guides, a discussion on how various professional roles have expanded through the widespread use and the new avenues of BIM practices and services, a wealth of new case studies that clearly illustrate exactly how BIM is applied in a wide variety of conditions. Painting a colorful and thorough picture of the state of the art in building information modeling, the *BIM Handbook Third Edition* guides readers to successful implementations, helping them to avoid needless frustration and costs and take full advantage of this paradigm shifting approach to construct better buildings that consume fewer materials and require less time, labor and capital resources.

Basics for Architectural Design is geared towards beginning architectural students or professional architects who want to get a jump start into 3D parametric modeling for commercial structures. This book is filled with tutorials, tips, and tricks and will help you get the most out of your software in very little time. The text walks you through from concepts to site plans to floor plans and on through reflected ceiling plans, then ends with an easy chapter on how to customize Autodesk Revit to boost your productivity. The advantages of working in 3D are not initially apparent to most architectural users. The benefits come when you start creating your documentation and you realize that your views are automatically defined for you with your 3D model. Your schedules and views automatically update when you change features. You can explore your conceptual designs faster and in more depth. Learning to use Autodesk Revit will not make you a better architect. However, it will allow you to communicate your ideas and designs faster, easier, and more beautifully.
