## **Practical Guide To Mimo Radio Channel With Matlab Examples:**

Practical Guide to MIMO Radio Channel Tim Brown, Persefoni Kyritsi, Elizabeth De Carvalho, 2012-02-16 This book provides an excellent reference to the MIMO radio channel. In this book, the authors introduce the concept of the Multiple Input Multiple Output (MIMO) radio channel, which is an intelligent communication method based upon using multiple antennas. Moreover, the authors provide a summary of the current channel modeling approaches used by industry, academia, and standardisation bodies. Furthermore, the book is structured to allow the reader to easily progress through the chapters in order to gain an understanding of the fundamental and mathematical principles behind MIMO. It also provides examples of the Kronecker model, Weichselberger model, geometric and deterministic models, and ray tracing system scenarios, trade-offs, and visual explanations. The authors explain and demonstrate the use and application of these models at system level. Key Features: Provides a summary of the current channel modeling approaches used by industry, academia, and standardisation bodies; Contains experimental and measurement-based results; Provides a comprehensive down-to-earth approach with concise and visual explanations of MIMO Radio Channel; Covers a variety of system scenarios and explains the trade-offs involved in each; Accompanying website containing MATLAB code and solutions to related problems: <http://www.timbrown76.name/MIMObook>. Characterization and Modeling of the Polarimetric MIMO Radio Channel for Highly Diffuse Scenarios Shiqi Cheng,2016 A deeper understanding of the radio channel propagation phenomena is the key to improve the overall performance of wireless

communication systems This is particularly true for challenging propagation environments wherein strong diffuse scattering mechanisms are observed However the most recent radio channel models do not include this component and must be re evaluated In this thesis it is proposed to decompose the polarimetric MIMO radio channel into specular and dense multipath components SMC and DMC where DMC includes diffuse scattering and weak SMC The purpose of this decomposition is to investigate the contribution of DMC to the radio channel and develop a comprehensive modeling framework framework which has been applied to two propagation scenarios presenting strong diffuse scattering mechanisms indoor industrial and outdoor vegetation Here novel polarimetric models have been developed and validated from measured radio channels Moreover a multipath component distance MCD based automatic clustering identification algorithm is proposed to group SMC obtained from measured radio channels Its performance and robustness are compared with the K means MCD algorithm using cluster data simulated by the WINNER II channel model The validated clustering algorithm was then directly applied onto data which were estimated from the measured radio channels with or without DMC in the radio channel data model The results unambiguously demonstrate that the proposed models not only provide a better understanding of the propagation mechanisms but also that radio channel models without DMC could potentially mislead the interpretation of those mechanisms
