Mixing & Separating Materials

Different materials will often need to be mixed together or sometimes they are already mixed together and need to be separated. There are a number of different ways to mix and separate materials.

Mixing and separating materials

Soluble

Substances that dissolve in water, like salt, sugar and instant coffee, are called soluble substances.

These substances dissolve completely in water to make a solution.

Mixing and separating materials

Dissolving

Some solids or substances dissolve in water when you mix them together. When a substance dissolves, it looks like it has disappeared. However, although the substance cannot be seen, it is still there as it has just mixed with the water to make a solution.

Mixing and separating materials

Sieving

If there is a mixture of large solid particles and small solid particles, for example stones and soil, they can be separated by sieving.

Mixing and separating materials

Filtering

A mixture of water and a solid like sand can be separated by filtering. The mixture of sand and water is poured into the filter funnel, which is lined with filter paper. The water can pass through the paper to collect in the beaker. The sand particles cannot pass through the filter paper and instead collect in the filter funnel.

Mixing and separating materials

Evaporation

Evaporation is good for separating a liquid from a solution. For example, the salt from salty water can separate from the water by boiling the solution. The water will evaporate until it is all gone. The salt will be left behind. If we collect the water vapour that evaporates we can cool it to form water again.
