

These problems are for practice in drawing your molecular orbital diagrams, molecular electron configurations and determining bond order.

The following questions pertain to the  $F_2$  molecule:

- A) Draw the molecular orbital energy diagram for this molecule. Label all of the orbitals specifically.

- B) Give the molecular electron configuration for the molecule:

- C) Determine the bond order for the molecule:

$$\text{Bond Order} = (10 - 8) / 2 = 1$$

- D) Indicate whether the species is paramagnetic or diamagnetic:

Diamagnetic: No unpaired electrons

Edition continues Solomons Fryle and Snyder s tradition of excellence in teaching and preparing students for success in both  
the classroom and beyond Central to the authors is their approach in emphasizing organic chemistry s relationship between  
structure and reactivity To accomplish this the content is organized in a way that combines the most useful features of a  
functional group approach with one largely based on reaction mechanisms The authors philosophy is to emphasize  
mechanisms and their common aspects as often as possible and at the same time use the unifying features of functional  
groups as the basis for most chapters The structural aspects of the authors approach show students what organic chemistry  
is Mechanistic aspects of their approach show students how it works And wherever an opportunity arises the authors show
