Neurogerontology Aging And The Nervous System:

Neurogerontology James F. Willott, PhD, 1999-07-25 Neurogerontology tells the story of how the aging brain affects all aspects of cognition and physical performance. It comprehensively links the principles and substance of neuroscience with gerontology and psychology. Written largely from a behavioral neuroscience perspective, Neurogerontology explores the functional relationships between the central nervous system and psychological phenomena of aging, including perception, arousal, learning, cognition, and motor behavior. Willott emphasizes healthy aging, but dementia and other pathological conditions are discussed when relevant. This evidence-based approach to the neuroscience of aging makes this a valuable reference for professionals as well as an informative textbook for students in gerontology courses. Pathology of the Aging Human Nervous System Serge Duckett, J. C. de la Torre, 2001-05-17 This book is a concise and practical compendium of neuropathological information for all professionals whose responsibility it is to make diagnoses, care, and help elderly humans afflicted with neurological and/or psychiatric disorders. The term neuropathology includes a multitude of disciplines, including pathology, histology, genetics, immunology, biochemistry, radiology, etc. This disciplinary approach is reflected in this book. This new edition has been completely revised and brought up to date from the 20th to the 21st century. Basic neuroscientists were invited to contribute chapters explaining and describing basic scientific principles underlying the neuropathological disciplines. Also, additional information is provided concerning medic-legal issues, neuropharmacology, and a list of support groups for the elderly, neurologically or mentally impaired, in Brazil, Canada, Germany, the United Kingdom, and the USA.

Aging and the Nervous System Salvatore Giaquinto, 1988-01-15 With modern advances in health care, prolonging the average life span, rehabilitation programs for the elderly are of increasing importance. This book examines not only techniques for maintaining an older person's quality of life but also the process of rehabilitating those in whom the brain is damaged, providing an authoritative account of the structural and neuropsychological changes that occur in the aging nervous system, whether healthy or diseased. It discusses such timely topics as the relationship between aging and dementia, cognitive activity and personality, neuropsychological training, and medical treatment in a social context. **The Aging Nervous System** Gabe J. Maletta, Francis J. Pirozzolo, 1980 **Encyclopedia of Biomedical Gerontology**, 2019-11-20 Encyclopedia of Biomedical Gerontology Three Volume Set presents a wide range of topics ranging from what happens in the body during aging, the reasons and mechanisms relating to those age-related changes, and their clinical, psychological, and social modulators and determinants. The book covers the biological and medical aspects of gerontology within the general framework of the biological basis of assessing age, biological mechanisms of aging, age-related changes in biological systems, human age-related diseases, the biomedical practicality and impracticality of interventions, and finally, the ethics of intervention. Provides a one-stop resource to information written by world-leading scholars in the field of biomedical gerontology. Fills a critical gap of information in a field that has seen significant progress in the last 10 years. **Geriatric**

Autonomic Nervous System in Old Age George A. Kuchel, 2019-04-26 In recent years all western industrialized countries and to a growing extent even many developed and developing Asian nations have witnessed a remarkable growth in numbers of older people 1 Future projections anticipate continued increases particularly in numbers of individuals who are 85 years and older 1 Although US statistics have indicated recent declines in disability trends 2 overall numbers of older individuals living with disability and functional dependence are likely to increase given

projected increases in life expectancy 3 For example average life expectancy for women born today in the United States is nearly 80 for men it is nearly 75 1 With these considerations in mind many investigators have begun to pay increasing attention to identifying factors which may predict the transition from health and independence to disability and dependence in older individuals eventually providing useful targets for interventions 3 4
