Contributed by Paul A. Davis

Welcome to Revit Architecture 2012

Revit Architecture is a robust software package for architects and building designers purpose-built for "Building Information Modeling" (BIM). The aim of BIM is to create a virtual representation of your building design offering fully coordinated data and documents. From the BIM database, one can perform design tasks, query quantities and takeoffs, analyze relationships, and generate drawing sheets for construction documentation needs. BIM allows not just for data extraction, but also for such data to be used in meaningful ways. In short, BIM could be "consistent," "coordinated," and "computable" building information.
