**New Paths for Acceptance** Márcia Machado, Francisco Machado, 2015-07-31 *New Paths for Acceptance Opening Awareness in Interpersonal Acceptance Rejection* gathers global data from recent studies on interpersonal relationships. The book focuses specifically on the influence of perceived acceptance and rejection by significant others on children, adolescents, and adults' well-being and development. In doing this, it offers valuable insight for academics, researchers, practitioners, teachers, and service agencies to better understand the importance of including the issue of quality of interpersonal relationships in their research, teaching, and clinical practice. Based primarily on interpersonal acceptance-rejection theory (IPARTheory), the book broadens and advances scientific knowledge about fundamental issues such as psychological adjustment, masculinity, school and academic-related issues, family functioning, parental alienation, intimate adult relationships, and other such topics. With contributions from researchers from three continents, the volume helps raise awareness about the crucial role that interpersonal acceptance plays across cultures on key issues such as these. The uncommon cultural diversity and multi-context nature of studies included in the book give readers the opportunity to learn about some of the most recent studies in this field and, at the same time, to have a privileged view of the broad scope and application of IPARTheory and research.

**Mentalization in the Psychosis Continuum: Current Knowledge and New Directions for Research and Clinical Practice** George Salaminios, Martin Debbané, Neus Barrantes-Vidal, Patrick Luyten, 2024-07-11 Impairments in mentalizing, the capacity to utilize mental state information to understand oneself and others, have consistently been identified across the developmental continuum of psychosis, from the premorbid and prodromal stages to its clinical forms. Mentalizing difficulties in psychosis have been investigated using an array of different methodologies, including novel experimental tasks, narrative assessments, self-report measures, as well as neuroscientific and computational methods. These studies have primarily examined how mentalizing disturbances relate to symptom dimensions and functional outcomes in clinical samples, as well as the transition to clinical psychosis among those who are at increased risk. More recently, clinical adaptations of mentalization-based treatments (MBT) and other psychotherapeutic approaches with a focus on supporting people suffering with psychosis, reflect on their own and others' mental states, such as Metacognitive Reflection and Insight.
