

# control and versatility

## RTC<sup>3</sup>, RTC<sup>4</sup>

SCANLAB's RTC<sup>3</sup> PC interface boards provide synchronous, interference-resistant control of scan systems and lasers in real time.

A high performance signal processor and the supplied DLL simplify programming under Windows. Alternatively, industry-proven software packages from various third-party vendors are also available for handling a palette of standard applications.

Software instructions are loaded alternately in the RTC's two 64-bit buffers, processed by the DSP, and output as 16-bit control signals every 10 µs to the scan system. The RTC's processor automatically performs vital steps such as macro-decomposition and image field correction. Laser control is synchronized with the scanner movements. Various programmable laser signals are available for vector and bitmap processing (see diagram on reverse side).

The RTC<sup>4</sup> is downward-compatible with the RTC<sup>3</sup>. Additionally, the RTC<sup>4</sup> is capable of communicating with the processor onboard SCANLAB's new InteliSCAN<sup>®</sup> scan heads – thus, it furnishes to the control PC the real-time stream of scan head axis status parameters and enables extensive scan system diagnostic possibilities. Optimized InteliSCAN<sup>®</sup> scan head tuning profiles for diverse processing tasks can be selected via software commands. Compared to the RTC<sup>3</sup>, the RTC<sup>4</sup> offers more memory, faster performance and additional software instructions (e.g. arc command). For controlling external components, the RTC<sup>4</sup> provides 16 digital input ports and 16 digital output ports.

SCANLAB's RTC<sup>3</sup> PC interface boards are available with numerous options, providing the extensive flexibility system integrators need for meeting diverse customer requirements. Furthermore, an I/O extension board is available for controlling additional external components.
