themselves but they interact and collide in such a way that suddenly mathematics is bringing forth art and science becomes an argument for unexplainable emotions Many questions and theories are explored in these pages What is the Eureka experience how do the brain and mind make creative decisions and what is the role of emotion In the end The Origins of Creativity will explore with you the possibility of creativity being a genetically encoded product of the evolution of the brain favored by natural selection but influenced by the environment of each individual as it unifies traditional views on creativity with today s new sciences of the mind
