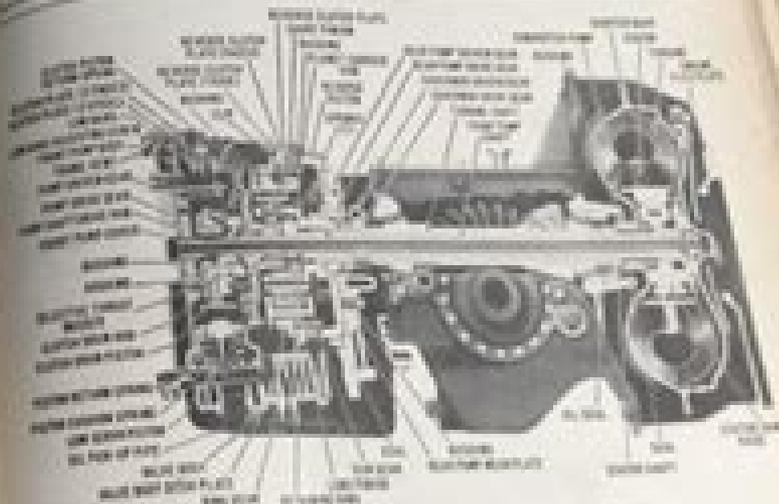

Fig. 1. Powerglide

DESCRIPTION

The Powerglide transmission is a four-speed, manual, sliding-gear type. It is designed to operate with the Corvair engine and is a major component of the drivetrain. The transmission is mounted to the chassis and is connected to the engine and the rear axle. The input shaft is connected to the engine and the output shaft is connected to the rear axle. The gears are arranged in a straight line and are meshed with each other. The sliding-gear mechanism allows the driver to select the desired gear by moving the shift lever.

MAINTENANCE

Adding Oil

The Powerglide transmission requires regular maintenance to ensure proper operation. The most important maintenance task is adding oil. The oil level should be checked regularly and the oil should be changed at the recommended intervals. The oil should be added to the transmission through the dipstick. The dipstick is located on the side of the transmission housing. The oil level should be checked with the vehicle on a level surface and the engine off. The oil level should be checked with the dipstick at the full mark.
