

First Grade Lesson Plan – Good Vibrations

Suggested time: 45 minutes

Lesson Snapshot:

In this lesson, students will explore the disciplinary core ideas: vibrating matter can make sound and sound can make matter vibrate.

Through planning and investigating, students will produce evidence to answer the question, “Can you make something move by using only sound?” Additionally, students will apply their knowledge of vibration to create a sound system.

The crosscutting concept of cause and effect is embedded into this lesson as students conduct investigations focused on sounds and vibrations.

Background Information:

Sound is a form of energy and travels as sound waves. Sounds can be created and heard when these sound waves travel through matter in the form of vibrations. Humans and animals can hear sound through their sense of hearing, which is made possible by ears. When vibrating air molecules (sound waves) reach the ear, the eardrum vibrates, producing sound. Instruments and voices produce vibrations that make sounds. Sounds also make objects vibrate. Depending on the strength and force of the vibrations, these vibrations can make other things (matter) move. For example, loud sounds can be so strong that their vibrations can cause a glass to break.

Fun Fact: Did you know, sound does not exist in space?!
