**Membrane Computing and Cryptographic Systems** Zaher Salah,Badr Amr,2015-10-13 Membrane computing is an area of computer science aiming to abstract computing ideas and models from the structure and the functioning of living cells In short it deals with distributed and parallel computing models processing multiset with an essential role played by the communication among compartments where evolution rules and evolving objects are encapsulated into compartments delimited by membranes RSA algorithm is the most widely used public key cryptosystem In practice public key encryption schemes are slower than symmetric key counterparts due to using large numbers in power calculations Since mathematical calculations need long time to perform encryption decryption processes In this book two proposed designs of RSA using the membrane computing environment ideas are proposed The first model depends on decreasing time of power calculations as it runs RSA algorithm as three parallel threads with all calculations which can be done parallel are executed at the same time The second proposed design is depending on representing the parallel nature of membrane computing by using GPU model

**Membrane Computing** Thomas Hinze,Grzegorz Rozenberg,Arto Salomaa,Claudio Zandron,2019-01-31 This book constitutes revised selected papers from the 19th International Conference on Membrane Computing CMC19 CMC 2018 which was held in Dresden Germany in September 2018 The 15 papers presented in this volume were carefully reviewed and selected from 20 submissions The contributions aim to abstract computing ideas and models from the structure and the functioning of living cells as well as from the way the cells are organized in tissues or higher order structures Membrane Computing Gheorghe Paun,2003-02-25 This book constitutes the thoroughly refereed post proceedings of the International Workshop on Membrane Computing WMC CdeA 2002 held in Curtea de Arges Romania in August 2002 The 29 revised full papers presented were carefully selected during two rounds of reviewing and revision some were especially solicited for inclusion in the book after the workshop Most papers address membrane systems and membrane computing from the point of view of theoretical computer science some papers solve open problems and present new approaches and others provide mathematical and biological background All in all the book presents the state of the art in membrane computing

*Applications of Membrane Computing* Gabriel Ciobanu,Mario J. Pérez-Jiménez,Gheorghe Păun,2007-08-06 Membrane computing is a branch of natural computing which investigates computing models abstracted from the structure and functioning of living cells and from their interactions in tissues or higher order biological structures The models considered called membrane systems P systems are parallel distributed computing models processing multisets of symbols in cell like compartmental architectures In many applications membrane systems have considerable advantages among these are their inherently discrete nature parallelism transparency scalability and nondeterminism In dedicated chapters leading experts explain most of the applications of membrane computing reported so far in biology computer science computer graphics and linguistics The book also contains detailed reviews of the software tools used to simulate P systems **Membrane**
