When multiple forces act on an object, they can combine to cause an object to move in a different direction or at a different speed. When the forces on an object are balanced, the object will not change its motion. When the forces on an object are unbalanced, the object will change its motion. The direction and speed of the object's motion will change depending on the forces that act on it. For example, if a car is moving to the right and a force is applied to the left, the car will slow down or stop. If a force is applied to the right, the car will speed up. If a force is applied upwards, the car will move in a different direction. If a force is applied downwards, the car will move in a different direction. If a force is applied to the left, the car will move in a different direction. If a force is applied to the right, the car will move in a different direction.
