The journal *Aequationes Mathematicae* publishes papers in pure and applied mathematics and in particular articles on functional equations combinatorics and dynamical systems Its 50th volume appears in 1995 To mark this occasion we are publishing in book form a representative collection of outstanding survey papers assembled for our anniversary issue of *Aequationes Mathematicae* The articles by Quackenbush Targonski and Moszner discuss composition of functions from different points of view universal algebra dynamical systems iteration and functional equations The Ono Robbins Wahl and the Vince papers on number theory and tiles respectively are thematically linked by lattices Combinatorics in turn links the Vince paper with that of Tutte whose subject is chromatic sums its tools differential and functional equations The Paganoni Ratz and the Forti papers deal with conditional functional equations and with the related topic of stability Applications to the social and behavioral sciences in particular to aggregation and some theory are presented in the paper by J Aczel The aim of the collection is to survey selected fields of current interest We trust that it will be useful and informative for researchers teachers graduate and advanced undergraduate students of mathematics and for those interested in applications in related fields
