## The Structure of the Registry

The Registry has a hierarchal structure, although it looks complicated the structure is similar to the directory structure on your hard disk, with Regedit being similar to Windows Explorer.

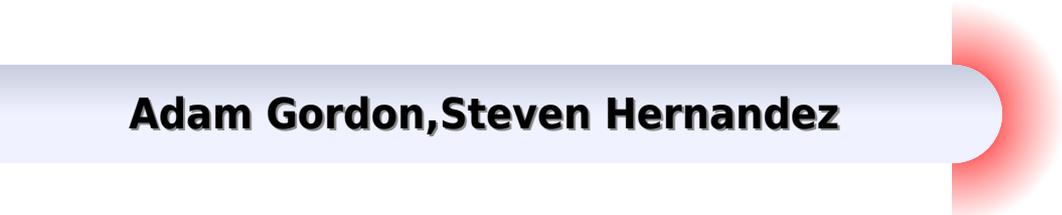

Each main branch (denoted by a folder icon in the Registry Editor, see left) called a **Hive**, and Hives contains **Keys**. Each key can contain other keys (sometimes referred to as sub-keys) well as **Values**. The values contain the actual information stored in the Registry. There are three types of values; *String*, *Binary*, and *DWORD* - the use of the depends upon the context.

There are six main branches, each containing a specific portion of the information stored in the Registry. They are as follows:

- **HKEY\_CLASSES\_ROOT** - This branch contains all of your file associations to support the drag-and-drop feature, OLE information, Windows shortcuts, and core aspects of the Windows user interface.
- **HKEY\_CURRENT\_USER** - This branch links to the section of HKEY\_CLASSES\_ROOT appropriate for the user currently logged onto the PC and contains information such as logon names, desktop settings, and Start menu settings.
