

Cladogram for Tetrapods

A cladogram presents hypothesized evolutionary relationships among a group of species based on shared ancestry and derived characters.

CLADE

A clade is a group of organisms that share certain traits derived from a common ancestor. In this cladogram, a clade looks like the letter 'V' including all the branches that extend from the right end of the 'V'. The diapsida clade includes lizards and snakes, crocodiles and alligators, and birds.

NODE

In a cladogram, a node is the intersection of two branches. This node represents the most recent common ancestor shared by the entire tetrapoda clade.

DERIVED CHARACTER

Organisms that branch off after a hash mark share the derived character represented by the hash mark. An embryo protected by amniotic fluid is a derived character shared by all organisms in the amniota clade. Amphibians do not have this derived character.

CRITICAL THINKING

Which groups of animals belong to the amniota clade? Which belong to the archosauria clade?

Quizlet Biology Chapter 18

Michael Rajnik

Quizlet Biology Chapter 18:

Eventually, you will totally discover a new experience and carrying out by spending more cash. yet when? pull off you resign yourself to that you require to get those every needs past having significantly cash? Why dont you attempt to get something basic in the beginning? Thats something that will guide you to comprehend even more in this area the globe, experience, some places, taking into consideration history, amusement, and a lot more?

It is your totally own grow old to action reviewing habit. in the middle of guides you could enjoy now is **Quizlet Biology Chapter 18** below.
