focused on large scale wall paintings or altarpieces and on the presentation of life size saints or protagonists whose physical proportions and interactions in narratives were considered more important than notions of overall effect or pictorial format. The second part of the book discusses the discovery of composition and its consequences for both the theory and practice of painting understood as the production of tableaux or easel pictures. Puttfarcken considers the effects on paintings of size, location, perspective, and relief; the relationship between ground and figures and between image and frame; and the different traditions defining Italian and Northern art. For readers with an interest in the theory and history of European art, this book is full of rich insights and fresh analyses.
