Real-World Applications of Evolutionary Computing Stefano Cagnoni,Riccardo Poli,George D. Smith,David Corne,Martin Oates,Emma Hart,Pier L. Lanzi,Egbert J. Willem,Yun Li,Ben Paechter,Terence C. Fogarty,2000-03-29 The increasingly active field of Evolutionary Computation EC provides valuable tools inspired by the theory of natural selection and genetic inheritance to problem solving machine learning and optimization in many real world applications Despite some early intuitions about EC that can be dated back to the invention of computers and a better formal definition of EC made in the 1960s the quest for real world applications of EC only began in the late 1980s The dramatic increase in computer performances in the last decade of the 20th century gave rise to a positive feedback process EC techniques became more and more applicable stimulating the growth of interest in their study and allowing in turn new powerful EC paradigms to be devised In parallel with new theoretical results the number of fields to which EC is being applied is increasing day by day along with the complexity of applications and application domains In particular industrially relevant fields such as signal and image processing computer vision pattern recognition industrial control telecommunication scheduling and timetabling and aerospace engineering are employing EC techniques to solve complex real world problems
