## **Object Perception Object Perception:**

*Object Perception* Bryan E. Shepp, Soledad Ballesteros, 2013-04-15 This collection of research on object perception focuses on holistic and featural properties of objects the mechanisms that produce such properties how people choose one type of property over another and how such choices are improved during the course of child development The contributions consider alternative perceptual characterizations the way in which such properties are represented in the mind how particular properties are more useful in some kinds of tasks that humans perform and how the developing child learns to cope with different properties in choosing among alternatives to optimize task performance These papers were written by specialists for specialists in experimental cognitive and developmental psychology

**Multisensory Object Perception in the Primate Brain** Marcus Johannes Naumer, Jochen Kaiser, 2010-07-03 It should come as no surprise to those interested in sensory processes that its research history is among the longest and richest of the many systematic efforts to understand how our bodies function The continuing obsession with sensory systems is as much a reflection of the fundamental need to understand how we experience the physical world as it is to understand how we become who we are based on those very experiences The senses function as both portal and teacher and their individual and collective properties have fascinated scientists and philosophers for millennia In this context the attention directed toward specifying their properties on a sense by sense basis that dominated sensory research in the 20th century seems a prelude to our current preoccupation with how they function in concert Nevertheless it was the concentrated effort on the operational principles of individual senses that provided the depth of understanding necessary to inform current efforts to reveal how they act cooperatively We know that the information provided by any individual sensory modality is not always veridical but is subject to a myriad of modality specific distortions Thus the brain's ability to compare across the senses and to integrate the information they provide is not only a way to examine the accuracy of any individual sensory channel but also a way to enhance the collective information they make available to the brain

Phinney Jr., 2018-08-30 Gale Researcher Guide for Object and Motion Perception is selected from Gale's academic platform Gale Researcher These study guides provide peer reviewed articles that allow students early success in finding scholarly materials and to gain the confidence and vocabulary needed to pursue deeper research

**Perception of Faces, Objects, and Scenes** Mary A. Peterson, Gillian Rhodes, 2003-05-22 From a barrage of photons we readily and effortlessly recognize the faces of our friends and the familiar objects and scenes around us However these tasks cannot be simple for our visual systems faces are all extremely similar as visual patterns and objects look quite different when viewed from different viewpoints How do our visual systems solve these problems The contributors to this volume seek to answer this question by exploring how analytic and holistic processes contribute to our perception of faces objects and scenes The role of parts and wholes in perception has been studied for a century beginning with the debate between Structuralists who championed the

role of elements and Gestalt psychologists who argued that the whole was different from the sum of its parts This is the first volume to focus on the current state of the debate on parts versus wholes as it exists in the field of visual perception by bringing together the views of the leading researchers Too frequently researchers work in only one domain so they are unaware of the ways in which holistic and analytic processing are defined in different areas The contributors to this volume ask what analytic and holistic processes are like whether they contribute differently to the perception of faces objects and scenes whether different cognitive and neural mechanisms code holistic and analytic information whether a single universal system can be sufficient for visual information processing and whether our subjective experience of holistic perception might be nothing more than a compelling illusion The result is a snapshot of the current thinking on how the processing of wholes and parts contributes to our remarkable ability to recognize faces objects and scenes and an illustration of the diverse conceptions of analytic and holistic processing that currently coexist and the variety of approaches that have been brought to bear on the issues

**Perception** John M. Wilding, 2017-03-16 Originally published in 1982 this book introduces the student to the central problem of all perceptual theories just how does the perceiver identify particular objects In focusing on the problem Dr Wilding provides a coherent well organized framework for its study bypassing the conventional split between perception and reaction time evidence which was common to most textbooks at the time The author draws on evidence from a wider number of research traditions and argues that each has a contribution to make to any account of perception Throughout he emphasizes the methodological basis of the research discussed in order to provide students with a solid foundation for their own practical work

**Oxford Handbook of Human Action** Ezequiel Morsella, John A. Bargh, Peter M. Gollwitzer, 2009 In the last decade there has been a tremendous surge of research on the mechanisms of human action This volume brings together this new knowledge in a single concise source covering most if not all of the basic questions regarding human action What are the mechanisms by which action plans are acquired learned mentally represented activated selected and expressed The chapters provide up to date summaries of the published research on this question with an emphasis on underlying mechanisms This bible of action research brings together the current thinking of eminent researchers in the domains of motor control behavioral and cognitive neuroscience psycholinguistics biology as well as cognitive developmental social and motivational psychology It represents a determined multidisciplinary effort spanning across various areas of science as well as national boundaries

**The Visual (Un)Conscious and Its (Dis)Contents** Bruno G. Breitmeyer, 2014-06-12 Visual control of our actions can be unconscious as well as conscious For example when a pedestrian steps onto a street and then suddenly steps back to avoid being hit by an oncoming car the pedestrian's visual system has been able to detect the car very rapidly Since the registration of the approaching car in conscious vision could take a few hundreds of milliseconds possibly too long to avoid being struck by it the rapid injury avoiding action has relied on the oncoming car being detected at unconscious levels in the visual system So how and at what level in the visual system is a

stimulus processed unconsciously This book explores unconscious and conscious vision investigated using psychophysical and brain recording methods These methods allow microtemporal analyses of visual processing during the interval ranging from a few 10s to a few 100s of milliseconds between a stimulus s impinging on the retinae and its eliciting a behavioral response or a conscious percept By tying these findings to well known neuroanatomical and physiological substrates of vision the book presents and discusses theoretical and empirical approaches to and findings on conscious and unconscious vision In addition to presenting an in depth integrative review of recent and ongoing scientific and scholarly research the book proposes several avenues for directing future research in these areas It also provides a well articulated theoretical and a detailed empirical base that points to the special importance of the processing of surface properties of visual objects to their conscious vision Aimed at scientists and scholars in visual cognition visual neuroscience and more broadly cognitive science including that part of the philosophical community that is currently occupied with the mind brain problem the book sheds new light on and advances experimental philosophical and scholarly research on visual consciousness

**Modes of Perceiving and Processing Information** H. L. Pick, Jr., E. Saltzman, 2014-03-18 First published in 1978 Since World War II the field of perception has developed in two major directions The first evolved out of the traditional psychophysical approach and is manifest today in the new psychophysics The second direction is in the increasing bond between the fields of perception and cognition This volume grew out of the context of this second direction a particular product of two workshops held in the Spring of 1974 and 1975 organized by the Committee on Cognitive Research of the Social Science Research Council The Committee on Cognition was organized in 1971 to encourage communication and interaction on specific problems in the area of cognition among the various social sciences

*Blindness and Brain Plasticity in Navigation and Object Perception* John J. Rieser, Daniel H. Ashmead, Ford Ebner, Anne L. Corn, 2007-08-10 Research into the development of sensory structures in the brains of blind or visually impaired individuals has opened a window into important ways in which the mind works In these individuals the part of the brain that is usually devoted to processing visual information is given over to increased processing of the touch and hearing sense This d

*From Fragments to Objects* Thomas F. Shipley, Philip J. Kellman, 2001-11-30 This book addresses the problem of how the human visual system organizes inputs that are fragmented in space and time into coherent stable perceptual units objects In doing so it addresses the following questions what kinds of segmentation and grouping abilities exist in human perceivers What information and computational processes achieve segmentation and grouping What are the psychological consequences of perceiving whole objects From Fragments to Objects Segmentation and Grouping in Vision takes a comprehensive cognitive science approach to object perception brings together separate lines of research in object perception in one volume gives an integrated and up to date review of theory and empirical research and offers directions for future study Jacket

*Social Psychology* Jeffrey H Goldstein, 2013-09-25 Social Psychology Philosophical and Theoretical Issues deals with the development of ideas and how these ideas can qualify other

findings The book reviews the philosophical and theoretical issues involved in social psychology such as its goals and its scientific relevance The text also examines the knowledge of psychology today especially the content validity as many errors have influenced the historical development of the science The book then discusses the testing approach to theories through testing hypotheses manipulating then measuring variables experimental studies quasi experiments and research on research The text also explains attitude change propoganda and communication including the cognitive consistency theory or the behaviorist learning theory as well as variations of these two theories The book also addresses the levels of different attractions involving those of strangers friends and brief acquaintances The author cites evidence that attraction between people is heightened when they have the same personality beliefs and even some physical characteristics The text can prove informative for psychiatrists psychologists behavioral scientists and students and professors in psychology as well as general readers interested in human interaction The Teacher's handbook of psychology James Sully,1914 **Sensory**

**Individuals** Aleksandra Mroczko-Wąsowicz,Rick Grush,2023-07-06 Sensory Individuals Unimodal and Multimodal Perspectives provides an interdisciplinary well balanced and comprehensive look at different aspects of unisensory and multisensory objects using both nuanced philosophical analysis and informed empirical work The research presented in this book represents the field s progression from treating neural sensory processes as primarily modality specific towards its current state of the art according to which perception and its supporting neural processes are multi modal modality independent meta modal and task dependent Even within such approaches sensory stimuli properties brain activations and corresponding perceptual phenomenology can still be characterized in a modality specific way The book examines the basic building blocks of human perception and whether they are best understood as sensory modality dependent units of different forms or multimodal perceptual objects The book combines a variety of innovative and integrative angles to explore the topic and acts as a catalyst for an increasingly diverse field of research which is in an exciting phase of growth and advancement New questions are arising as quickly as they are being answered and the collection Sensory Individuals provides an original and up to date addition to the field **Advances in Neural Networks Research** D.C. Wunsch II,M. Hasselmo,K.

Venayagamoorthy,D. Wang,2003-08-22 IJCNN is the flagship conference of the INNS as well as the IEEE Neural Networks Society It has arguably been the preeminent conference in the field even as neural network conferences have proliferated and specialized As the number of conferences has grown its strongest competition has migrated away from an emphasis on neural networks IJCNN has embraced the proliferation of spin off and related fields see the topic list below while maintaining a core emphasis befitting its name It has also succeeded in enforcing an emphasis on quality **Emerging Cognitive Abilities in Early infancy** Francisco Lacerda,Claes von Hofsten,Mikael Heimann,2000-11-01 Written by a group of developmental scientists this book debates cognitive achievements in early infancy from a multidisciplinary perspective The editors combine knowledge from different areas of infant development research to present an integrated view of the

cognitive abilities emerging in early infancy The chapters are arranged in a sequence that best conveys to the reader the line of reasoning that emerged during the development of this book The book opens with chapters dealing with fundamental and general aspects of cognitive development sweeps through the specific theme of language acquisition and closes by returning to general questions concerning different representation modalities *Visual Perception and Representation of Objects and Faces* Javid Sadr,2003 Interpreting the results of visual object perception experiments is too often ill posed due to the disparate and sparse choice of stimuli To address this problem we have developed a flexible new technique called Random Image Structure Evolution RISE In the simplest case RISE involves the presentation of image sequences depicting the evolution of a coherent image from a seemingly random field along with the reverse sequences depicting the transformation back into randomness As it samples a subset of the space of possible stimulus images RISE image processing strictly preserves low level attributes such as frequency spectra and luminance and RISE experiments are designed to provide objectively verifiable measures of the onset and offset of subjects conscious percepts In turn these onset and offset measures can serve as quantitative markers for characterizing a number of intriguing perceptual phenomena Here I describe the basic RISE paradigm and discuss experimental applications of this technique which it is hoped may contribute greatly to the study of key aspects of high level vision Building on results from psychophysical studies of perceptual onset priming and hysteresis as well as findings from a magnetoencephalographic study using RISE this thesis explores the use of RISE in characterizing the perceptual markers and neural substrates of object and face perception In addition this thesis examines the issue of object perception and in particular robust face perception within the context of the cortical representations that may underly them presenting and evaluating a simple well motivated image coding scheme based on ordinal relations *The Works of Thomas Reid Now Fully Collected, with Selections from His Unpublished Letters ; Preface, Notes and Supplementary Dissertations by Sir William Hamilton. Prefixed Stewart's Account of the Life and Writings of Reid* Thomas Reid,1872 **Studies in Human Nature** Sir James Black Baillie,1921 *The Chautauquan* ,1881 **The Hibbert Journal** Lawrence Pearsall Jacks,George Dawes Hicks,1922
