Fast Protein Liquid Chromatography (FPLC) W. Haasnoot, H.L. Elenbaas, G. Cazemier, 1983

Protein Liquid Chromatography M. Kastner, 2000 Protein Liquid Chromatography is a handbook style guide to liquid chromatography as a tool for isolating and purifying proteins consisting of 25 individual chapters divided into three parts Part A covers commonly used classic modes of chromatography such as ion exchange size exclusion and reversed phase Part B deals with various target protein classes such as membrane proteins recombinant proteins and glycoproteins and Part C looks at various miscellaneous related topics including coupling reaction buffer solution additives and software The text as a whole can be viewed as a systematic survey of available methods and how best to use them but also attempts to provide an exhaustive coverage of each facet How to solve a specific problem using a chosen method is the overall essence of the volume The principle philosophy of this compilation is that practical application is everything therefore both classical and modern methods are presented in detail with examples involving conventional medium and high pressure techniques Over exposure to history concept and theory has deliberately been avoided The reader will find a wealth of tips and tricks from users for users including advice on the advantages and disadvantages of each method Easy to read sections on Getting started now and Where to go from here attempt to provide hands on fool proof detailed practical procedures with complete and even standard model runs for any scientist or technician at work in this area

FPLC, Fast Protein Liquid Chromatography, 1985

Protein Purification Protocols Paul Cutler, 2008-02-02 The first edition of Protein Purification Protocols 1996 edited by Professor Shawn Doonan rapidly became very successful Professor Doonan achieved his aims of producing a list of protocols that were invaluable to newcomers in protein purification and of significant benefit to established practitioners Each chapter was written by an experienced expert in the field In the intervening time a number of advances have warranted a second edition However in attempting to encompass the recent developments in several areas the intention has been to expand on the original format retaining the concepts that made the initial edition so successful This is reflected in the structure of this second edition I am indebted to Professor Doonan for his involvement in this new edition and the continuity that this brings Each chapter that appeared in the original volume has been reviewed and updated to reflect advances and bring the topic into the 21st century In many cases this reflects new applications or new matrices available from vendors Many of these have increased the performance and or scope of the given method Several new chapters have been introduced including chapters on all the currently used protein fractionation and chromatographic techniques They introduce the theory and background for each method providing lists of the equipment and reagents required for their successful execution as well as a detailed description of how each is performed

HPLC Marvin C. McMaster, 2007-01-29 This Second Edition of the classic handbook details how to set up an HPLC system that capitalizes on the latest innovations It covers new techniques in high temperature micro flow and ultra fast chromatography the linking of an HPLC to a mass spectrometer and more

Complete with a CD ROM and appendices this guide has everything chromatographers need to know to confidently separate identify purify and quantify compounds Note CD ROM DVD and other supplementary materials are not included as part of eBook file

Protein Purification Protocols Shawn Doonan,2008-02-02 Hans Neurath has written that this is the second golden era of enzymology Protein Science 1994 vol 3 pp 1734 1739 he could with justice have been more general and referred to the second golden age of protein chemistry The last two decades have seen enormous advances in our understanding of the structures and functions of proteins arising on the one hand from improvements and developments in analytical techniques see the companion volume Basic Protein and Peptide Protocols in this series and on the other hand from the technologies of molecular genetics Far from turning the focus away from protein science the ability to isolate analyze and express genes has increased interest in proteins as gene products Hence many laboratories are now getting involved in protein isolation for the first time either as an essential adjunct to their work in molecular genetics or because of a curiosity to know more about the products of the genes that they have been studying Protein Purification Protocols is aimed mainly at these newcomers to protein purification but it is hoped that it will also be of value to established practitioners who may find here techniques that they have not tried but which might well be most applicable in their work With the exception mainly of the first and last chapters the format of the contributions to the present book conform to the established format of the Methods in Molecular Biology series

Peptide and Protein Drug Delivery Using Polysaccharides Aakanchha Jain,Sonia Malik,2023-10-05 Peptide and Protein Drug Delivery Using Polysaccharides offers an interdisciplinary discussion of polysaccharides applied in peptide and protein drug delivery Chapters consider basic biology of different polysaccharides of current interest and their production at pilot and large scale stages by various techniques including but not limited to cell and hairy root cultures Other sections examine factors affecting polysaccharide absorption metabolism and excretion in nascent encapsulated or conjugated forms with unique coverage of vaccine absorption metabolism and drug delivery A final section considers analytical methods for detection in tissue fluids and homogenates Accessible figures tables and graphical abstracts are included throughout to support understanding Specific polysaccharides discussed for therapeutic purposes include cellulose hyaluronic acid heparin chondroitin alginic acid agar and myrrh acacia tragacanth ghatti gum chitin chitosan starch glycogen and dextran Adopts an interdisciplinary approach across biochemistry molecular biology pharmaceutical sciences and drug delivery and biotechnological perspectives Features accessible figures tables and graphical abstracts across all chapters to support understanding Examines various polysaccharides of current interest and aspects affecting their absorption metabolism excretion and detection
