

- Recheck the adjustment and repeat adjustment as necessary.
- Retighten the jam nut to secure the cable when correct adjustment is reached.

NOTE: If you are uncertain that you have reached the correct adjustment, refer to Traction Control Adjustment in Adjustment Section.

SECTION 3: KNOW YOUR SNOW THROWER

Figure 7

WARNING: Read, understand, and follow all instructions and warnings on the machine and in this manual before operating.

Traction Control / Auger Control Lock

The traction control is located on the right handle. Squeeze the traction control to engage the wheel drive. Release to stop. See Figure 7.

This same lever also locks the auger control so you can turn the chute directional control without interrupting the snow throwing process. If the auger control is engaged along with the traction control, the operator can release the auger control (on the left handle) and the augers will remain engaged. Release the traction control to stop both the augers and track drive (auger control must also be released).

IMPORTANT: Always release traction control before changing speeds.

Auger Drive Control

The auger drive control is located on the left handle. Squeeze the control grip to engage the augers. Release to stop the snow throwing action. (Traction control must also be released.) See Figure 7.

Chute Tilt Control

The distance snow is thrown can be changed by adjusting the angle of the chute assembly. Move the chute tilt control forward to decrease the distance, toward the rear to increase. See Figure 7.

Skid Shoe

The position of the skid shoe is determined by the condition of the ground from where snow has to be removed. See Figure 7.

Shift Lever

The shift lever is located in the center of the handle panel and is used to determine both ground speed and direction of travel. It can be moved into any of eight positions. See Figure 7.

Forward

Your snow thrower has six forward (F) speeds. Position number one (1) is the slowest. Position number six (6) is the fastest.

Reverse

Your snow thrower has two reverse (R) speeds. R1 is the slower, while R2 is the faster of the two.

IMPORTANT: Always release traction control before changing speeds.

Mokarem,2006 Pavement surface texture is measured in a variety of ways in Virginia Two methods commonly used are ASTM E 965 Standard Test Method for Measuring Pavement Macrotexture Depth Using a Volumetric Technique known as the sand patch test and ASTM E 2157 Standard Test Method for Measuring Pavement Macrotexture Properties Using the Circular Track CT Meter In September 2005 staff from the Virginia Transportation Research Council inquired about using the Digital Surface Roughness Meter DSRM to measure the surface texture of several concrete and asphalt surfaces Measurements were taken on concrete and asphalt surfaces using the DSRM CT meter and sand patch test and the results were compared From the data obtained there appears to be a good correlation among the results of the three methods The DSRM and sand patch tests appear to be more accurate on surfaces that are not uniform However this may be because the center of the rotating arm of the CT meter may have missed particular non uniform areas on the testing surface The use of the DSRM and CT meter devices also reduces the probability of human error The sand patch test is exposed to a greater probability of human error it is a test that cannot be performed quickly without comprising accuracy The DSRM is a better device to use under a time constraint **Autocar & Motor** ,1993-11
