Stratospheric Flight Andras Sóbester,2011-06-28 In this book Dr Andras Sobester reviews the science behind high altitude flight He takes the reader on a journey that begins with the complex physiological questions involved in taking humans into the death zone How does the body react to falling ambient pressure Why is hypoxia oxygen deficiency associated with low air pressure so dangerous and why is it so difficult to design out of aircraft why does it still cause fatalities in the 21st century What cabin pressures are air passengers and military pilots exposed to and why is the choice of an appropriate range of values such a difficult problem How do high altitude life support systems work and what happens if they fail What happens if cabin pressure is lost suddenly or even worse slowly and unnoticed The second part of the book tackles the aeronautical problems of flying in the upper atmosphere What loads does stratospheric flight place on pressurized cabins at high altitude and why are these difficult to predict What determines the maximum altitude an aircraft can climb to What is the coffin corner and how can it be avoided The history of aviation has seen a handful of airplanes reach altitudes in excess of 70 000 feet what are the extreme engineering challenges of climbing into the upper stratosphere Flying high makes very high speeds possible what are the practical limits The key advantage of stratospheric flight is that the aircraft will be above the weather but is this always the case Part three of the book investigates the extreme atmospheric conditions that may be encountered in the upper atmosphere How high can a storm cell reach and what is it like to fly into one How frequent is high altitude clear air turbulence what causes it and what are its effects on aircraft The stratosphere can be extremely cold how cold does it have to be before flight becomes unsafe What happens when an aircraft encounters volcanic ash at high altitude Very high winds can be encountered at the lower boundary of the stratosphere what effect do they have on aviation Finally part four looks at the extreme limits of stratospheric flight How high will a winged aircraft will ever be able to fly What are the ultimate altitude limits of ballooning What is the greatest altitude that you could still bail out from And finally what are the challenges of exploring the stratospheres of other planets and moons The author discusses these and many other questions the known knowns the known unknowns and the potential unknown unknowns of stratospheric flight through a series of notable moments of the recent history of mankind s forays into the upper atmospheres each of these incidents accidents or great triumphs illustrating a key aspect of what makes stratospheric flight aviation at the limit

Boeing Models 777-200 Operations Manual Boeing Company,1994

Systems Engineering for Commercial Aircraft Scott Jackson,2015-03-28 The key principle of systems engineering is that an aircraft should be considered as a whole and not as a collection of parts Another principle is that the requirements for the aircraft and its subsystems emanate from a logical set of organized functions and from economic or customer oriented requirements as well as the regulatory requirements for certification The resulting process promises to synthesize and

validate the design of aircraft which are higher in quality better meet customer requirements and are most economical to operate This book is more of a how and a why guide rather than a what guide It stresses systems engineering is an integrated technical managerial process that can be adapted without sacrificing quality in which risk handling and management is a major part It explains that the systems view applies to both the aircraft and the entire air transport system The book emphasizes that system engineering is not an added layer of processes on top of the existing design processes it is the glue that holds all the other processes together The readership includes the aircraft industry suppliers and regulatory communities especially technical program and procurement managers systems design and specialty engineers human factors reliability safety etc students of aeronautical and systems engineering and technical management and government agencies such as FAA and JAA
